	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Add, remove, and view desired Steam games and price thresholds in a local watchlist.json file ● Query the CheapShark API to compare a game's sale price against its historical lowest sale price ● Check a calendar of major Steam sales and send notifications	**Schedule - (For V2.0+)** ● Set up Windows Task Scheduler to make it run every afternoon automatically ● Record sale price check into a CSV file over time to track how frequently a game goes on sale ● Generate a visual line graph using matplotlib to visualize how a game's discount drop
Not Important	**Delegate - (Use a library)** ● Use Python's requests library to handle API GET/POST calls ● Use Python's built-in argparse and json to parse terminal flags and read/write watchlist.json ● Use the tabulate library to print side-by-side price comparison tables in the console	**Delete - (Cut it)** ● Building a web app or desktop window ● Logging into a Steam account via script to purchase games automatically ● Training a machine learning model to guess future discount percentages
